

Negative Space

Game Idea

This is a fast arena survival game set inside a single black-and-white comic panel. You protect a glowing white silhouette of a girl from shadowy ink monsters by blasting them with pure light. Every kill floods the screen with brightness, and the game constantly dims toward darkness, so you have to chain kills to stay alive.

The game teaches you that light is good and dark is bad. Then it shows you that this was wrong: the "monsters" are the ink that gives the girl her shape, and your light is erasing her.

Overall Game Flow

Core loop: Enemies crawl in from the panel edges → you shoot or dash through them → each kill releases a burst of white light and raises your combo multiplier → the screen slowly dims on its own → if light hits 0%, you lose. The closer to darkness you get before a kill, the bigger the multiplier, so the game rewards risky play.

Phase	Time	What happens
1. Lie	0–3 min	The screen starts dark. You learn the controls and the "light vs. shadow" premise.
2. Escalation	3–8 min	Faster enemies and large "Ink Floods" appear. The combo system pulls you into keeping the screen blindingly bright.
3. Clues	8–12 min	When brightness passes 80%, the girl fades into the white background. Enemies stop attacking her and start wrapping around her like a protective outline.
4. Realization	12–14 min	The screen is almost fully white and the girl is barely visible. A giant ink-vortex boss appears.
5. The Whiteout	14–15 min	After the boss dies, the game prompts something like "PRESS [SPACE] TO UNLEASH PURE LIGHT." If you don't press it, you die. If you do, the screen goes pure white and the girl vanishes. The final box reads: " <i><undecided text that says something about the girl dying></i> " Then the final score is shown.

The ending works as a tragic twist: the player doesn't know that he's actually killing the girl he's trying to save until he does.

How We Use the Themes

Comic

- The whole game happens inside one comic panel, drawn in black and white.
- The story is told with yellow narration boxes that turn red at the climax, and sound effects appear as physical on-screen text ("BLAM!").
- The twist depends on how ink art works: a white shape only exists because black ink defines its edges.

Light

- Light is both the core mechanic and the story. A single exposure/brightness value drives survival, scoring, combo multipliers, and visibility.
- Kills create light bursts, and the screen dims over time. Light is the player's health bar, score engine, and weapon.
- The player is the only colored element (a neon outline).

Twist

- The enemies aren't monsters. They are the ink that draws the girl, and the player's goal of maximum light is what destroys her.
